TBR

ENGINEERING

WHAT PROBLEMS DOES IT SOLVE?

Time-Consuming Installation

Our pre-engineered jack and hydraulic mechanisms reduce multiple push points.

Structural Inconsistencies

No more guesswork! The Wall Jack System ensures consistent quality and alignment—every time.

Limited Labor Training

Easy to assemble. Cut down on training without compromising results and safety.

Limited Design Flexibility

Whether it's residential, commercial, or industrial—our modular system adapts to your project.

ENGINEERING

ADVANTAGES AND BENEFITS

The smart, powerful solution for fixing bowing, buckling, and cracking basement foundation walls – with ease, precision, and repeat use.

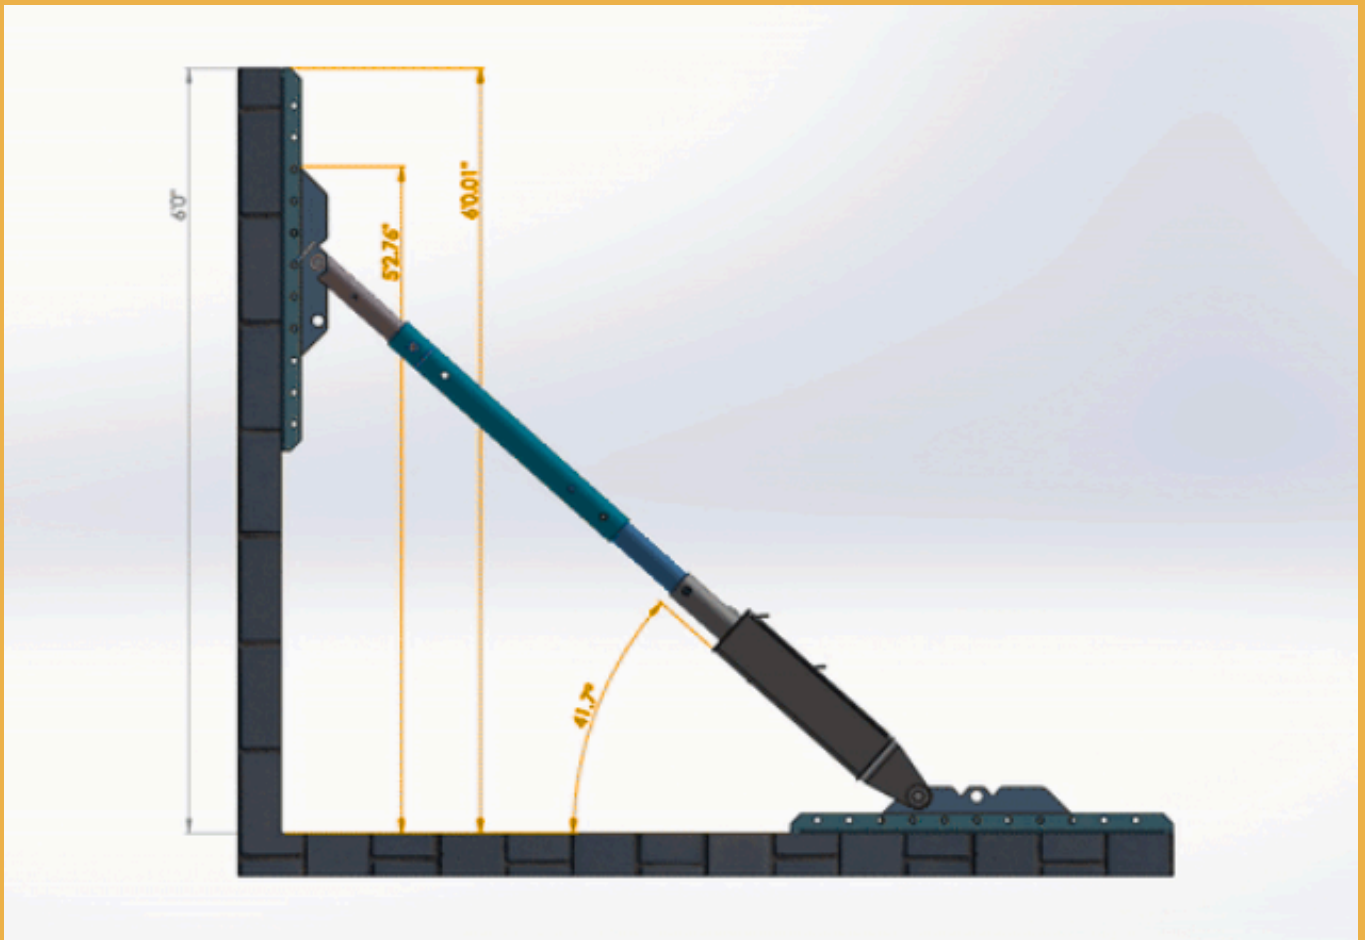

- **Hydraulic Power** – Each unit is powered by a hydraulic jack
- **Flexible & Versatile** – Designed for fast setup and repositioning
- **Wall Compatibility** – Works on walls 4–16" thick and 2–12 ft high
- **Two Powerful Models:**
 - **WJS-5000** – Handles up to 8-inch walls
 - **WJS-8000** – Handles up to 12-inch walls
- **Compact Storage** – Flat horizontal arrangement for easy transport & storage
- **Lightweight Build** – Less than 150 lbs at full extension
- **Durable Material** – Built with high-strength US Steel
- **Quiet Operation** – Installs with little to no noise
